

WEEK 3 – THREAT IDENTIFICATION TOOLKIT

Introduction

Threat identification is the process of analyzing suspicious behaviour, malicious communication, and cybersecurity risks before they damage systems or networks.

Objective

The objective was to create a phishing triage toolkit and cybersecurity awareness checklist for identifying phishing attacks and malicious communication.

Security Checklist

Check Type	Example
Sender Verification	Fake domains
URL Analysis	Lookalike websites
Attachment Analysis	exe, .scr files
Psychological Triggers	Fear & urgency
QR Code Verification	Quishing attacks

Decision Tree

Incoming Message

Is it suspicious?

Yes No

Analyze Safe

Malicious?

Yes No

Block Warn User

Cyber Threat Techniques Studied

- Phishing
- Spear Phishing
- Whaling
- QR Code Phishing
- Social Engineering
- Fake Technical Support
- Identity Theft
- Credential Theft

Code

Input

```
link = input("Enter Website Link: ")
```

```
if "@" in link or "login" in link or "verify" in link:
```

```
    print("Warning: Suspicious Link Detected")
```

```
else:
```

```
    print("Safe Link")
```

```
print("Threat Analysis Completed")
```

output

```
Enter Website Link: Warning: Suspicious  
Link Detected  
Threat Analysis Completed
```
